

SHAURYA PATEL

Curious by nature. Driven to discover.

Student | Researcher | Innovator | Guitarist

Ahmedabad, India | Class X | Adani International School

HOME

I HAVE QUESTIONS.

I'M LEARNING HOW TO FIND THE ANSWERS.

I'm Shaurya.

I'm 14, a student at Adani International School, and someone who is curious about how things work — from the human body and healthcare to artificial intelligence, technology and music.

Research has taught me how to ask better questions. Competitions have taught me how to defend my ideas. And playing the guitar has taught me that not every problem has just one right answer.

This is my journey of learning, exploring and building what's next.

CLASS X

Adani International School

2× GOLD

IRIS National Fair

2025

Represented India at Regeneron ISEF

GUITAR

My creative side

ABOUT

WHO IS SHAURYA?

I don't think I've figured that out yet.

And at 14, I don't think I'm supposed to.

I'm a student, researcher and someone who enjoys following questions wherever they lead me. My interests currently sit at the intersection of **life sciences, healthcare, technology and artificial intelligence**.

My research journey has shown me how a question can become a hypothesis, how evidence can change an idea, and how difficult questions can make a project stronger.

Outside research, I love playing the guitar — a completely different space where curiosity becomes creativity.

WHAT I KEEP COMING BACK TO

SCIENCE

Understanding how things work.

HEALTHCARE

Exploring how technology can contribute to better health outcomes.

AI & TECHNOLOGY

Understanding how data, patterns and technology can help solve meaningful problems.

MUSIC

Finding another way to think, create and express.

WHERE IT STARTED

Curiosity came first.

I started by wanting to understand **why** things happen. Over time, that became a desire to understand whether things could work differently — or better.

That curiosity led me towards science and research.

It eventually brought me to questions around healthcare, artificial intelligence and preventive health.

And that's where my current research journey began.

PROJECT

EARLYDETECT-AI

A UNIFIED METABOLIC HEALTH SCORE

Can we make complex health information easier to understand?

Today, health information can be fragmented across different test reports, clinical measurements, apps and health indicators.

My research explores the idea of bringing these different inputs together into a single, interpretable **Metabolic Health Score**.

The concept is inspired by the way a financial credit score brings multiple factors together into one understandable metric.

The proposed score aims to combine **clinical biomarkers, lifestyle factors and diagnostic information** to create a more holistic view of an individual's metabolic health.

THE QUESTION

How might we identify metabolic health risks earlier and make those risks easier to understand and track?

THE IDEA

A single score that could potentially:

- Bring different health indicators together
 - Stratify metabolic risk into low, moderate and high-risk categories
 - Identify which health domains contribute most to an individual's risk
 - Track how risk changes over time
 - Potentially support more personalised digital or clinical intervention
-

MY ROLE

I led the research journey from defining the clinical question and identifying focus disorders to reviewing scientific literature, preparing outcome summaries and supporting variable selection.

I also contributed to data cleaning and quality assurance alongside medical, biostatistics and digital-health teams.

An important part of the process was understanding the ethical considerations involved in working with anonymised patient data.

THE BIGGER QUESTION

The research currently focuses on metabolic conditions including **type 2 diabetes, obesity, MASLD and PCOS**, where patients can receive health information across multiple reports and platforms without a single measure that communicates their overall metabolic trajectory.

The project also explores a preliminary oncology dimension, looking at potential relationships between metabolic health and patterns associated with cancer risk. This part of the research remains exploratory and continues to evolve as data collection progresses.

WHAT I LEARNED

Research isn't about finding the answer quickly.

It's about learning to ask the right question, finding evidence, listening to criticism, checking your assumptions and being willing to change your thinking.

The project is still evolving. And that's part of the point.

BEYOND ACADEMICS

THERE'S MORE TO ME THAN RESEARCH.

Science is one part of who I am.

The rest is still being discovered.

MUSIC

SIX STRINGS. A DIFFERENT WAY OF THINKING.

When I'm not working on a research question, you'll probably find me with a guitar.

Music gives me a completely different way to think.

Research often asks:

What is the right answer?

Music asks:

What do you want it to sound like?

For me, both involve patience, practice, experimentation and learning from mistakes.

CURIOSITY OUTSIDE THE CLASSROOM

I'm interested in exploring the world beyond textbooks and classrooms.

That means competitions, research, conversations, new experiences and simply following a question far enough to see where it leads.

CURRENTLY CURIOUS ABOUT

AI

How machines recognise patterns and learn from information.

HEALTHCARE

How technology can contribute to better health outcomes.

LIFE SCIENCES

Understanding the science behind the human body.

RESEARCH

How questions become evidence.

MUSIC

How creativity can turn patterns into expression.

STILL LEARNING

I don't want to define myself by one career or one subject at 14.

Right now, I want to keep exploring.

Learn something.

Try something.

Question something.

Build something.

Repeat.

MEDIA

SHAURYA IN THE NEWS

A collection of moments, stories and milestones from my research journey.

FEATURED

Gold at IRIS National Fair 2025–26

Shaurya Patel, a Class X student at Adani International School, Ahmedabad, won Gold for the second consecutive year at the IRIS National Fair 2025–26. His research focused on developing a unified Metabolic Health Score to bring together clinical, lifestyle and diagnostic information.

ON THE NATIONAL STAGE

IRIS National Fair 2025–26

120 projects by 152 students were evaluated at the national fair, with Shaurya's project receiving Gold recognition.

REPRESENTING INDIA

Regeneron International Science and Engineering Fair — 2025

After winning Gold at IRIS in 2025, Shaurya represented India at the prestigious Regeneron ISEF 2025 in Columbus, Ohio.

AWARDS

MILESTONES ALONG THE WAY

2026

GOLD MEDAL — IRIS NATIONAL FAIR 2025–26

For research exploring a unified Metabolic Health Score for metabolic health risk stratification.

Second consecutive Gold at IRIS.

2025

GOLD MEDAL — IRIS NATIONAL FAIR

Recognition that led to Shaurya representing India at the Regeneron International Science and Engineering Fair 2025.

REPRESENTED INDIA — REGENERON ISEF 2025

Columbus, Ohio, USA.

MORE TO COME

This page shouldn't feel finished.

Every new competition, project, recognition and milestone becomes another chapter.

ONE LAST THING

I'M 14.

There's a lot I don't know yet.

That's exactly why I'm still asking questions.

And I can't wait to see where they take me.
